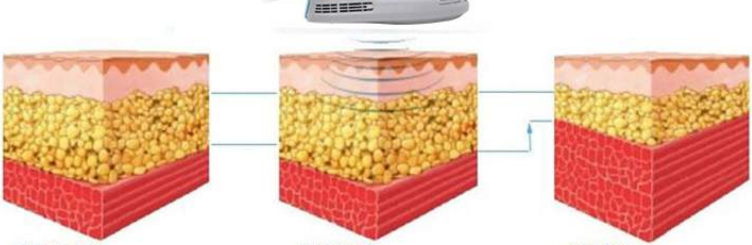
EMSculpt
muscle building&body slimming
4 handles can support 4 clients at the same time!

WORKING PRINCIPLE

During only 30 minute treatments, HI-EMT squezes the muscle more than 30,000 times,and it just feel like your do intensive workout, This is called "Inactive-exer-cise" and it also has the same effects on the human body, building muscle while losing fat.



BEFORE

Skin, fat and muscle form your overall body appearance

DURING

The skin remains unaffected while the energy penetrates to fat and muscle layers.

AFTER

This results in substantial improvement of your appearance due to building muscle and burning fat.

HIFEM beauty muscle instrument uses non-invasive HIFEM technology to release high-frequency magnetic vibration energy through two large treatment handles to penetrate the muscles to a depth of 8cm, and induce continuous expansion and contraction of muscles to achieve high-frequency extreme training , to deepen the growth of myofibrils (muscle enlargement), and produce new collagen chains and muscle fibers (muscle hyperplasia), thereby training and increasing muscle density and volume.

The 100% extreme muscle contraction of HI-EMT technology can trigger a large amount of fat decomposition,Fatty acids are broken down from triglycerides and accumulated in fat cells.The concentrations of fatty acids are too high ,causing the fat cells to apoptosis, which is excreted by the body's normal metabolism within a few weeks. Therefore, slim beauty machine can strengthen and increase muscle, and reduce fat at the same time.
